

Heavy Diesel Commercial Motor Vehicle On-Board Diagnostic Exception List

This list is made for the purposes of section 13 of Ontario Regulation XXX/XX: Vehicle Emissions.

A small number of heavy diesel commercial motor vehicles have been identified with unique testing characteristics that prevent them from being OBD-tested to determine if the OBD system has an active emission-related DTC.

If a vehicle is identified on the list below, a vehicle emissions report that indicates a pass may be issued under s.13 of O. Reg. XXX/XX without the vehicle being tested for whether the OBD system has an active emissions-related DTC. Such a vehicle would need to show compliance with the opacity standards in order to be issued a vehicle emissions report indicating a pass.

This list will be updated regularly as heavy diesel commercial motor vehicles that cannot be OBD-tested are identified.
