- b. Should wells be considered as drinking water sources, they must be constructed in accordance with Regulation 903 - Wells, under the Ontario Water Resources Act.
- c. The water of the Lower Shebandowan Lake should not be used for human consumption unless it is disinfected and/or treated to meet the Ontario Drinking Water Quality Standards, as stipulated in O. Reg. 169/03 of the Safe Drinking Water Act.
- d. The use of Best Management Practices for shoreline development is strongly recommended. Best Management Practices such as shoreline naturalization and vegetated buffer strips can reduce the adverse effects of shoreline development on inland lakes. It is recommended that sewage systems be located where native soils are deepest, and at the furthest distance possible from the shoreline.
- e. The landowners shall implement best management practices to prevent localized increase in phosphorous, algae and weeds along the shoreline. Several best management practices should be considered to protect local water quality including minimizing stormwater volumes and contaminant loads. Examples include:
 - Avoid developing next to the shoreline for a minimum of 30 metres and maintaining vegetation along the shore and around the property;
 - Use grassed swales and/or vegetated filter strips on lots that require ditching to control runoff;
 - Direct roof leaders to rear yard ponding areas, soakaway pits or rain barrels;
 - Direct sump pump foundation drains to rear ponding areas and infiltration trenches; and
 - Locate sewage systems as far as possible from the shoreline where native soils are deepest, with any drinking water wells remaining up gradient.
