SAFETY DATA SHEET

Effective Date: 06/01/2015 Replaces 05/01/2012

Recycled Asphalt Product (RAP)

1. Identification		
Product name:		
Recycled Asphalt Product		
Other means of identification/Synonyms/Common Names:		
Re-crushed Asphaltic Concrete, Recycled Base (Crushed Misc. Base), Rap Cap Agg.		
Recommended use:		
Recycled Asphalt Product is used as a construction material.		
Recommended restrictions:		
None Known		
Manufacturer/Contact info:	General Phone Number:	
Vulcan Materials Company and its subsidiaries and affiliates	1.866.401.5424	
1200 Urban Center Drive	Emergency Phone Number:	
Birmingham, AL 35242	1.866.401.5424 (3E Company, 24hours/day, 7 Days/week)	
	Website:	
	www.vulcanmaterials.com	

2. Hazard(s) Identification	
Physical hazards:	Health hazards:
Not Classified	Carcinogenicity-Category 1A
	Specific target organ toxicity, repeated exposure- Category 2
	Signal word:
	Danger
	Hazard Statement: May Cause Cancer (Inhalation). Causes damage to organs (lungs, respiratory system) through prolonged or repeated exposure (inhalation)
 Precautionary statement: Prevention Obtain special instructions before use. Do not handle until all safety precautio 	ins have been read and understood.
 Use personal protective equipment as Wash hands thoroughly after handling. Do not eat, drink or smoke when using 	
Response	
• If exposed or concerned get medical ac	dvice/attention.
Disposal	
	ance with all local, regional, national, and international regulations.
Supplemental information:	
, ,	naturally occurring mineral complex with varying quantities of quartz (crystalline
	CS) may cause cancer. Recycled Asphalt Product may be subjected to various
natural or mechanical forces that pro	oduce small particles (dust) which may contain respirable crystalline silica (particles)
less than 10 micrometers in aerodyna	amic diameter). Repeated inhalation of respirable crystalline silica (quartz) may

cause lung cancer according to IARC, NTP; ACGIH states that it is a suspected cause of cancer.

	ents	
Chemical name	CAS number	%
Aggregate (crushed stone, sand, gravel, slag)	Mixture	60-90
Quartz (crystalline silica)	14808-60-7	>1
Asphalt Cement	8052-42-4	10-40
Reclaimed product may contain		
contaminants such as heavy metals,		
hydrocarbons and various asphalt additives.		
4. First-aid measures		
Inhalation:		
Remove person to fresh air. If lung irritation pe	rsists or later develops, contac	t a physician. If not breathing, initiate
rescue breathing, give oxygen by trained perso	-	
victim from confined spaces without adequate	-	a attention. Do not attempt to rescue
Eyes:	protective equipment.	
Immediately flush eye(s) with plenty of clean w	ater for at least 15 minutes w	hile holding the evelid(s) open
Occasionally lift the eyelid(s) to ensure thoroug		• • • •
eye(s). Contact a physician if irritation persists		
Skin:	of later develops.	
Not expected to be a significant exposure route	Clean exposed skin with soar	or mild detergent and large amounts of
water until all material is removed from the ski		
Ingestion:		
If swallowed, do not induce vomiting. Drink a la	arge volume of water and get i	mmediate medical attention Never give
anything by mouth to an unconscious person.		
	ii voimung occurs, keep neau r	
Most important symptoms/effects, acute and delayed

Unconsciousness and this product is not sold heated, exposure t ential for exposure increases if product er, silicosis can be progressive, and ersons with silicosis have an increased risk mys/week).

Specific hazards arising from the chemical: Do not heat above flash point.

Fumes/vapors can explode when concentrated in an enclosed environment and supplied with an ignition source. Never weld or use a cutting torch or open flame on a full, partially full or empty bin, hopper, or other container that holds or

has held asphaltic material unless precautions are taken to prevent explosion. WARNING: Hydrogen sulfide (H_2S) and other hazardous gases/vapors may evolve and collect in the headspace of storage tanks or other enclosed vessels, and can create an explosive, toxic, or oxygen deficient atmosphere. H_2S gas is extremely flammable and can explode if an ignition source is provided. See Section 11 for health effects of H_2S gas.

Special protective equipment and precautions for firefighters:

Avoid breathing irritating and potentially toxic fumes, including hydrogen sulfide gas. Firefighters should wear

NIOSH/MSHA approved positive pressure breathing apparatus (SCBA) with full face mask and full protective equipment. Fire-fighting equipment/instructions:

Adding water to hot asphalt presents an explosion hazard.

Specific methods:

Use water spray to keep fire-exposed containers cool.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures:

Ventilate area and avoid inhalation by using appropriate precautions outlined in this SDS (see Section 8). Prevent materials from entering streams, drainages, or sewers. Spills entering surface waters or sewers entering/leading to surface waters must be reported to the National Response Center 1-800-424-8802. Based on volume and use, components of this product may be subject to reporting requirements of Title III of SARA, 1986, and 40 CFR 372.

For emergencies, contact 3E Company at 1-866-401-5424 (24 hours/day, 7 days/week).

Environmental precautions:

Contain spilled material with sand, aggregate fines, or other inert adsorbent. Collect adsorbed product and clean up materials in appropriate container for proper disposal. Notify proper authorities.

Methods and materials for containment and cleaning up:

Contact the asphalt plant to determine feasibility of recycling material. Dispose of waste materials in accordance with applicable federal, state and local laws and regulations.

7. Handling and storage

Precautions for safe handling:

Follow personal protection and protective controls set forth in Section 8 of this SDS when handling this product. If personnel must enter a tank or other confined space that contained this material, follow the OSHA Confined Space Entry Program as specified in 29 CFR 1910.146. Do not store near food, beverages or smoking materials. Respirable crystalline silica-containing dust may be generated when recycled asphalt product is subjected to mechanical forces, such as demolition work, surface treatment (sanding, grooving, chiseling, etc.), and/or recycling of pavement. Do not attempt to clean empty containers since residue is difficult to remove. Do not pressurize, cut, weld, braze, solder, drill, grind or expose such containers to heat, flame, sparks, static electricity, or other sources of ignition as they may explode and cause injury or death. Tripping accidents have occurred because of asphalt buildup on bottoms of shoes and boots; buildup should be removed regularly to prevent such accidents. Do not use solvents or thinners to clean footwear.

Conditions for safe storage, including any incompatibilities:

Store away from all ignition sources and open flames in accordance with applicable laws and regulations. When petroleum asphalt products are heated, potentially irritating emissions (fumes, mists, and vapors) may be released.

8. Exposure controls/personal protection

Legend:

NE = Not Established; PEL = Permissible Exposure Limit; TLV = Threshold Limit Value; REL = Recommended Exposure Limit; OSHA = Occupational Safety and Health Administration; MIOSH = National Institute for Occupational Safety and Health; ACGIH = American Conference of Governmental Industrial Hygienists

Component	OSHA/MSHA PEL	ACGIH TLV	NIOSH REL
component	F LL	120	KEE
Particulates not otherwise classified	15 mg/m 3 (total dust) 5 mg/m 3 (respirable fraction)	10 mg/m ³ (inhalable fraction) 3 mg/m ³ (respirable fraction)	NE
Respirable dust containing silica	$10 \text{ mg/m}^3 \div (\% \text{ silica + 2})$	Use Respirable Silica TLV	Use Respirable Silica TLV
Total dust containing silica	OSHA: $30 \text{ mg/m}^3 \div (\% \text{ silica + 2})$ MSHA: $30 \text{ mg/m}^3 \div (\% \text{ silica + 3})$	NE	NE
Respirable Crystalline Silica (quartz)	NE - Use respirable dust containing silica PEL	0.025 mg/m ³	0.05 mg/m ³
Respirable Tridymite and Cristobalite (other forms of crystalline silica)	½ of OSHA and MSHA respirable dust containing silica PEL	0.025 mg/m ³	0.05 mg/m ³

Exposure Guidelines:

Respirable dust and quartz levels should be monitored regularly to determine worker exposure levels. Exposure levels in excess of appropriate exposure limits must be reduced by all feasible engineering controls, including (but not limited to), ventilation, process enclosure, and/or enclosed employee workstations.

Engineering Controls:

Activities with dried/hardened product that generate dust require the use of general ventilation, local exhaust and/or wet suppression methods to maintain exposures below appropriate exposure limits.

Eye Protection:

Safety glasses with side shields should be worn as minimum protection at ambient temperatures. Contact lens should not be worn when eye contact with product is possible.

Skin Protection (Protective Gloves/Clothing):

Avoid skin contact with material by wearing impervious gloves and protective clothing. With product at ambient temperatures, use disposable nitrile, neoprene or butyl rubber material.

Respiratory Protection:

Not expected to be necessary under normal use and working conditions. All respirators must be NIOSH-approved for the exposure levels present. (See NIOSH Respirator Selection Guide). The need for respiratory protection should be evaluated by a qualified safety and health professional. For air-contaminant concentrations which exceed or are likely to exceed applicable exposure limits, use a NIOSH-approved, contaminant-specific, air purifying respirator. If such conditions are sufficiently high that the air-purifying respirator is inadequate, or if oxygen adequate to sustain life is not present, use a positive-pressure, self-contained breathing apparatus. Activities that generate dust require the use of an appropriate dust respirator where dust levels exceed or are likely to exceed allowable exposure limits. For respirable silica levels that exceed or are likely to exceed an 8-hour Time Weighted Average (TWA) of 0.5 mg/m³, a high-efficiency particulate filter respirator must be worn at a minimum; however, if respirable silica levels exceed or are likely to exceed an 8-hour TWA of 5.0 mg/m³ a positive-pressure, full-face respirator or equivalent is required. Respirator use must comply with applicable MSHA (42 CFR 84) or OSHA (29 CFR 1910.134) standards, which include provisions for a user training program, respirator inspection, repair and cleaning, respirator fit testing, medical surveillance and other requirements.

9. Physical and chemical properties

Appearance:

Angular particles, light salt and pepper colored ranging in size from 1 ½ inch down to 200 mesh.

Odor:	PH:	Decomposition temperature:
Petroleum odor.	Not applicable	Not applicable
Melting point/freezing point:	Initial boiling point and boiling range:	Flash point: Product NA
Not applicable	Not applicable	Asphalt :> 500°F (min). COC
Evaporation rate:	Flammability:	Upper/lower flammability or explosive limits:
Not applicable	Not applicable	Not applicable
Vapor pressure:	Vapor density:	Solubility:
Not applicable	>1	Negligible
Partition coefficient: n-octanol/water.	Autoignition temperature:	Specific Gravity (H ₂ O = 1):
Not applicable	Not applicable	1.0-1.1 @ 60° F

10. Stability and reactivity

Reactivity:

Not reactive under normal use.

Chemical stability:

Stable under normal temperatures and pressures.

Possibility of hazardous reactions:

None under normal use.

Conditions to avoid (e.g., static discharge, shock or vibration):

Keep away from direct flame/ignition sources. Contact with incompatible materials should be avoided (see below). See Sections 5, 6 and 7 for additional information.

Incompatible materials:

Strong oxidizers may react with hydrocarbons. Contact with fluorine may cause burning or explosion. Adding water to hot asphalt presents an explosion hazard.

Hazardous decomposition products:

Carbon monoxide and other compounds (such as amines, ammonia, nitrogen dioxide, sulfur dioxide, ozone, hydrogen sulfide, and various hydrocarbons) may be released by thermal decomposition. Hazardous vapors can collect in enclosed vessels or areas if not properly ventilated. (If hydrogen sulfide is present, the flammable limits range from 4.3 to 45.5% by volume and its presence may promote the formation of pyrophoric (spontaneously igniting) iron compounds (See 29 CFR 1910.146). Silica-containing respirable dust particles can be generated. When heated, quartz is

slowly transformed into tridymite (above 860°C/1580°F) and cristobalite (above 1470°C/2678°F).

Primary Routes of Exposure:

Inhalation and contact with the eyes and skin.

Symptoms related to the physical, chemical, toxicological characteristics

Inhalation:

Breathing silica containing dust for prolonged periods in the workplace can cause lung damage and lung disease called silicosis. Several scientific organizations have classified crystalline silica as causing lung cancer in humans. Silicosis and lung cancer can result in permanent injury or death.

Eye Contact:

May scratch the eye causing tearing, redness and a stinging sensation.

Skin Contact:

Repeated or prolonged exposure may result in absorption of component petroleum distillates.

Ingestion:

Asphalt has a low toxicity when ingested; however, chewing and swallowing asphalt may cause gastrointestinal effects. Gastric masses (Bezoars) and stomach (pyloric) obstructions have been reported in individuals who have chewed and swallowed asphalt.

Medical Conditions Aggravated by Exposure:

Pre-existing medical conditions that may be aggravated by exposure include disorders of the eye, skin and/or lung. Delayed and immediate effects and also chronic effects from short- and long-term exposure:

If the product is subjected to mechanical forces (such as demolition or asphalt recycling work), crystalline silicacontaining dust particles may be generated. Prolonged overexposure to respirable dusts in excess of appropriate exposure limits can cause inflammation of the lung leading to possible fibrotic changes, a medical condition known as pneumoconiosis.

Prolonged and repeated inhalation of respirable crystalline silica-containing dust in excess of allowable exposure limits may cause a chronic form of silicosis, an incurable lung disease that may result in permanent lung damage or death. Chronic silicosis generally occurs after 10 years or more of overexposure; a more accelerated type of silicosis may occur between 5 and 10 years of higher levels of exposure. In early stages of silicosis, not all individuals will exhibit symptoms (signs) of the disease. However, silicosis can be progressive, and symptoms can appear at any time, even years after exposure has ceased. Symptoms of silicosis may include, but are not limited to, the following: shortness of breath; difficulty breathing with or without exertion; coughing; diminished work capacity; diminished chest expansion; reduction of lung volume; right heart enlargement and/or failure. Persons with silicosis have an increased risk of pulmonary tuberculosis infection.

Repeated overexposures to very high levels of respirable crystalline silica (quartz, cristobalite, tridymite) for periods as short as six months may cause acute silicosis. Acute silicosis is a rapidly progressive, incurable lung disease that is typically fatal. Symptoms include, but are not limited to, shortness of breath, cough, fever, weight loss, and chest pain. Respirable dust containing newly broken silica particles has been shown to be more hazardous to animals in laboratory tests than respirable dust containing older silica particles of similar size. Respirable silica particles which had aged for sixty days or more showed less lung injury in animals than equal exposures of respirable dust containing newly broken particles of silica.

There are reports in the literature suggesting that excessive crystalline silica exposure may be associated with autoimmune disorders and other adverse health effects involving the kidney. In particular, the incidence of scleroderma (thickening of the skin caused by swelling and thickening of fibrous tissue) appears to be higher in silicotic individuals. To date, the evidence does not conclusively determine a causal relationship between silica exposure and these adverse health effects.

Carcinogenicity:

If the product is subjected to mechanical forces (such as demolition or asphalt recycling work), crystalline silicacontaining dust particles may be generated. Epidemiology studies on the association between crystalline silica exposure and lung cancer have had both positive and negative results. There is some speculation that the source and type of crystalline silica may play a role. Studies of persons with silicosis indicate an increased risk of developing lung cancer, a risk that increases with the level and duration of exposure. It is not clear whether lung cancer develops in non-silicotic patients. Several studies of silicotics do not account for lung cancer confounders, especially smoking, which have been shown to increase the risk of developing lung disorders, including emphysema and lung cancer.

In October 1996, an IARC Working Group designated respirable crystalline silica as carcinogenic (Group 1). The NTP's Report on Carcinogens, 9th edition, lists respirable crystalline silica as a "known human carcinogen." In the year 2000, the American Conference of Governmental Industrial Hygienists (ACGIH) listed respirable crystalline silica (quartz) as a suspected human carcinogen (A-2). These classifications are based on sufficient evidence of carcinogenicity in certain experimental animals and on selected epidemiological studies of workers exposed to crystalline silica.

Repeated breathing of asphalt emissions has not resulted in a carcinogenic response in laboratory animal testing. Although epidemiological studies on asphalt workers have suggested a possible link between asphalt fumes and certain types of cancer, confounding factors such as smoking and concomitant exposure to other agents in the workplace may have influenced the results of these studies. Asphalt is not listed as a carcinogen by the National Toxicology Program (NTP) or the Occupational Safety and Health Administration (OSHA). IARC states that there is sufficient evidence that extracts (asphalts dissolved in hydrocarbon solvents) are carcinogenic to laboratory animals and recently the agency determined that occupational exposures to oxidized asphalt and their emissions during roofing applications are "probably carcinogenic to humans "(Group 2A). They also determined that occupation exposures to hard asphalts and their emissions during mastic asphalt work and occupational exposures to straight-run asphalts and their emissions during paving operations are "possibly carcinogenic to humans" (Group 2B).

Additional information on toxicological-effects: Acute toxicity: Not classified No specific data on product. Based on components, not expected to be classified for acute toxicity.

Asphalt:

Acute Oral, rat: LD50 >5000 mg/kg Acute Dermal, rat: LD50 >2000 mg/kg

Skin corrosion/irritation: Not Classified

Serious eye damage/eye irritation: Not Classified

Respiratory sensitization: Not classified.

Germ cell Mutagenicity: Not classified

Carcinogenicity: May cause cancer (Inhalation).

Reproductive toxicity: Not classified

Specific target organ toxicity - single exposure: Not classified

Specific target organ- toxicity – repeated exposure: Causes damage to organs (lungs, respiratory system) through prolonged or repeated exposure (inhalation)

Aspiration toxicity: Not classified (not applicable- solid material)

12. Ecological information
Ecotoxicity (aquatic and terrestrial, where available):
No specific data on this product.
Persistence and degradability:
Expected to be resistant to biodegradation.
Bioaccumulative potential.
Significant migration into the environment and bioaccumulation are unlikely.
Mobility in soil.
Not determined
Other adverse effects.
Not determined

13. Disposal considerations

Safe handling and disposal of waste:

Place contaminated materials in appropriate containers and dispose of in a manner consistent with applicable federal, state, and local regulations. Prevent from entering drainage, sewer systems, and unintended bodies of water. It is the responsibility of the user to determine, at the time of disposal, whether product meets criteria for hazardous waste. Product uses, transformations, mixture and processes, may render the resulting material hazardous.

14. Transport information

14. Transport mormation	
UN Number:	
Not regulated.	
UN Proper shipping name:	
Not regulated.	
Transport Hazard class:	
Not applicable.	
Packing group, if applicable:	
Not applicable.	
Marine pollutant (Yes/No):	
Not applicable.	

15. Regulatory information

Toxic Substances Control Act (TSCA):

The components in this product are listed on the TSCA Inventory or are exempt.

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA):

Releases of this material to water may be reportable to the National Response Center under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) or to state and local emergency planning

committees under the Superfund Amendments and Reauthorization Act. (See Section 6)

Superfund Amendments and Reauthorization Act of 1986 (SARA), Title III:

Section 302 extremely hazardous substances: None

Section 311/312 hazard categories: Delayed Health

Section 313 reportable ingredients at or above de minimus concentrations: None

California Proposition 65:

This product contains a chemical (crystalline silica, bitumen, various aromatic hydrocarbons) known to the State of California to cause cancer and birth defects or other reproductive harm.

State Regulatory Lists:

Each state may promulgate standards more stringent than the federal government. This section cannot encompass an inclusive list or all state regulations. Therefore, the user should review the components listed in Section 2 and consult state or local authorities for specific regulations that apply.

Vulcan Materials Company and its subsidiaries and affiliates 1200 Urban Center Drive Birmingham, AL 35242

Dear Customer/Contractor:

Please find attached a safety data sheet (SDS) for the product that you purchased from Vulcan Materials Company or one of its subsidiaries or affiliates ("Vulcan"). This is a revised SDS and replaces any previous versions of the material safety data sheet (MSDS) for this product. This SDS is provided to you as required by the Occupational Safety and Health Administration's (OSHA) Hazard Communication Standard (29 CFR 1910.1200), the Mine Safety and Health Administration's (MSHA) Hazard Communication Standard (30 CFR Part 47), and/or any applicable state Right-to-Know laws.

It is the responsibility of your company to communicate this information to your employees, customers, and contractors who may use or come in contact with this product. Further, if you distribute this product, Vulcan requests, and applicable laws may require, that you forward this SDS to your customers.

Please direct this information to the person responsible for safety and health compliance at your company. If you have questions about the SDS, please contact Vulcan at 1200 Urban Center Drive, Birmingham, AL 35242 or 1-866-401-5424.

If you need additional copies of this or any other Vulcan SDS or a Spanish language version, you can obtain them at www.vulcanmaterials.com or by calling 1-866-401-5424.

La MSDS puede obtenerse en www.vulcanmaterials.com o llamando al 1-866-401-5424.

Sincerely,

Capithia Kkirby

Cynthia Kirby Director, Safety & Health
